

RESEARCH SOFTWARE

Write, version and publish
software in research

short.ub.uni-frankfurt.de/rdm

Support

- on questions of good scientific practice and research software
- clarify your questions about digital research software management and optimise workflows
- on questions regarding the FAIR4RS principles for software
- for support with text elements in third-party funding application for research software
- about metadata for research software

Training

If requested, we offer workshops on good scientific practice and research software. We are also happy to organise individual events in your working group or specialist area!

Git@GU

Git@GU is your central support service for version control and collaboration. We help researchers and staff navigate GitLab (GU's self-hosted instance) and GitHub Enterprise (our dedicated space on github.com) to version, collaborate, and publish research software – all with expert support for both platforms.
